

4508 Wellington Rd., Nanaimo, BC, V9T 2H3 P 758-3985 . F 758-8207

The Tick Lifecycle

Eggs

Several thousand eggs are laid into the environment

Larvae

Searches for a host (often small mammals or birds), takes a blood meal then falls off into the environment and molts into the nymph stage

Adult

Searches for a host (often larger mammals), takes a blood meal then falls off into the environment to lay eggs

Nymph

Searches for a host (often small mammals), takes a blood meal then falls off into the environment and molts into adults
